

Install automatic gas shut-off valve

Why

- ▶ Reduces the chances of a broken natural gas line and fire-causing leak following an earthquake.

How

- ▶ Have an automatic gas shut-off valve installed between the gas supply and the house.
- ▶ Check for any requirements from your building department or utility provider.

How to Identify

- ▶ Locate your gas meter and look for a device attached to the gas line with labels indicating it is a seismic or automatic shut-off valve. If uncertain, contact a licensed plumber.
