

Install a Spark Arrestor for Chimneys and Stovepipes

Why

- ▶ Prevents embers from entering or escaping the chimney and igniting nearby vegetation or structures, reducing the risk of wildfire spread and home ignition.

How

- ▶ Install a metal spark arrestor with a fine mesh screen over your chimney to block embers while allowing smoke to escape. Ensure the spark arrestor meets local fire codes and regulations.

How to Identify

- ▶ Look for a metal mesh screen covering the chimney cap, typically with openings no larger than 1/4 inch, to effectively trap embers.
