

Replace non-metal vent materials

Why

- ▶ Prevents melting, ignition, weakening, or breaking apart components critical to prevent ember and flame entry into the house.

How

- ▶ Replace any non-metal ridge vents or wall louvers with metal vents. Consult an experienced, licensed retrofit contractor for assistance.

How to Identify

- ▶ Inspect vents located in attics, crawl spaces, and exterior walls to determine the material type and distinguish between fire-resistant types like metal vs. combustible vents made of plastic and vinyl.
